

EmeraChem LLC has established a Dealership network throughout North America to support the needs of internal combustion engine (ICE) users in the natural gas compression, municipal water distribution and power generation markets.

This network of independent Dealers are strategically located across America providing high quality catalytic products and related standardized OEM services (usually only found at OEM facilities) for ICE users and managers of engine fleets. Also known as an authorized EmeraChem "Catalyst Service Center," these Dealers utilize the best in class catalytic technologies and systems. Each Dealer is well trained in catalyst applications, has full catalyst cleaning capabilities, analytical services support, including extensive inventories of EmeraChem catalyst elements, catalytic housings and silencers. These inventories also include replacement elements of all names and brands of catalyst.

As of July 1, 2011, 4 of the 6 EmeraChem Authorized Dealers will have catalyst washing stations in full operation with the balance of stations up and running by September 1, 2011. These regional wash stations located at the Dealers facility will provide users and operators of reciprocating engines quick response to catalyst washing needs in addition to all required catalyst services. Each Dealer will also hold periodic catalyst application seminars at their local Catalyst Service Center or at a customer location as requested.

With the support of the EmeraChem scientific and engineering staff, in addition to having immediate access to EmeraChem's vast experience base and resources, EmeraChem Dealers are fully equipped to solve and implement emission control challenges while providing prompt and cost effective services.

EmeraChem LLC is a leading developer and manufacturer of stationary and mobile catalytic products for gas turbine and reciprocating engine applications worldwide.
