### **Maximize Return on Used Catalyst**

An extremely important factor in reducing emission compliance costs when operating reciprocating internal combustion engines is to maximize the return on used catalyst elements. EmeraChem LLC is offering the highest reclaim value in the oil & gas industry for all brands and types of catalyst calculated at \$9.00 per pound of catalytic substrate (a reduced rate for torturous path substrate brands of catalyst).

Catalyst reclaim transactions are processed through your local EmeraChem Dealer. The Dealer also operates a full service Catalyst Service Center which includes catalyst washing and a Multi-Lambda Catalyst Testing System<sup>™</sup> that validate catalyst performance. As determined in conjunction with the customer, when a catalyst has reached the end of its useful life, customers will receive an immediate credit toward the purchase of new catalyst.

An additional way to reduce emission compliance cost is through capped catalyst pricing, even when the cost of precious metal goes up. If precious metal goes down, customers will see a price reduction for additional savings. In addition to being a full service OEM catalyst manufacturer, EmeraChem provides precious metal management services. Our services consist of the acquisition of high grade precious metals in specific amounts for a defined period of time, typically 12 – 24 months.
