### **Cap Your Catalyst Costs for 12 – 24 Months With Not to Exceed Pricing**

A key element to reducing the overall cost of emission compliance for reciprocating internal combustion engines is a pricing structure that ensures your catalyst costs will not increase over time, even if the cost of precious metal goes up. Not to exceed catalyst pricing is a function of precious metal management, a core competency of EmeraChem LLC. In addition to being a full service OEM catalyst manufacturer, EmeraChem provides precious metal management services that consist of the acquisition of high grade precious metals for specific amounts over a defined period of time.

EmeraChem's National Dealer Network can guarantee the maximum price a customer would pay for catalyst for a fixed period of time, anywhere from 12 to 24 months. Also, under this precious metal management program, if at any time during this 12 to 24 month period precious metal costs go down, EmeraChem will reduce its catalyst price providing customers even greater savings.

The EmeraChem precious metal management program also includes precious metal reclaim services for all brands and types of catalyst. EmeraChem offers a greater return per pound for catalyst than any other reclaim source in the oil & gas industry, further reducing customers annual catalyst purchase costs.
